Underground PVC Limited Warranty

Prices

All prices are subject to change at any time and all shipments will be invoiced at the price in effect at the time of shipment.

Payment

All orders are subject to the approval of Kroy Industries Credit Department and full or partial payment may be required in advance. All payments are to be made to Kroy Industries, P.O. Box 309, York, Nebraska 68467. If any account is delinquent, all further shipments will be on a C.O.D. basis. No cash discounts will be allowed on C.O.D. shipments.

Discount

Refer to the most recent dated schedules which are published periodically.

Warranty

Kroy products are warranted against defects resulting from faulty workmanship or materials. If any such product is found to be defective by reason of faulty workmanship or materials within two years of installation, upon written notice and return of the product, the defective product will be replaced by Kroy, free of charge, including shipping charges for the replacement product. Kroy Industries shall not be bound by any guarantee other than that set forth above unless such guarantee is in writing.

Kroy Industries' PVC pipe has been tested and meets specifications established by the United States Soil Conservation's Service Engineering Standards for underground irrigation pipe. The following tests are administered: Acetone, crush, impact, quick burst pressure and extrusion quality testing.

PVC Pipe Installation Procedures

Kroy Industries recommends the following procedures be followed when installing PVC underground irrigation pipe. Use these instructions in conjunction with any SCS specification on plastic irrigation pipe that applies to design and installation of pipelines in your area. We also recommend ASAE Standard 376.

Trenching

Excavate trench deep enough to provide a minimum cover to meet local requirements. The maximum depth of cover is four (4) feet fifty (50) foothead of 50 psi PVC pipe. The width of the trench at any point below the top of the pipe shall be no wider than is necessary to lay, join and backfill the pipe, and in any event shall not be more than twenty-four (24) inches wider than the nominal diameter of pipe or thirty-six (36) inches, whichever is smaller.

Exercise caution to insure that plastic pipe is installed in a clean bottom ditch. Where rock, boulders or other material which might damage pipe are encountered, the trench shall be undercut a minimum of four (4) inches below final grade. Fill undercut area to grade with sand or selected stable soil.

Testing

The pipeline shall be thoroughly tested for pressure strength and leakage before backfilling operations are undertaken. Bleed pipeline free of all entrapped air and slowly build up to the maximum design working head of the system. The line shall be inspected in its entirety while the maximum working head of the system is maintained.

Backfill Instructions

Backfill soil should be free of rocks, debris and large clods. Haul in additional backfill material if necessary.

Water Packing

All Low Head and 50 psi Pipe Must Be Water Packed

The pipeline shall be maintained at maximum operating pressure during the complete backfilling. Backfill until the pipe is covered with approximately eighteen (18) inches of soil, free of rocks and large clods. Slightly open as many valves as possible while water packing soil around pipe. Exercise caution to prevent flooding which could cause the pipe to float. After saturation, close valves and maintain maximum pressure on pipeline. The saturated fill should be allowed to dry until firm enough to walk on before beginning the final backfill operation.

Solvent Cement Application Instructions

1. Cut pipe ends square and smooth, remove burrs and ragged edges with file or abrasive paper.
2. If exceptionally dirty, clean mating surfaces of pipe and fitting socket with cleaner.
3. Apply a full even coating of primer to the pipe and a thin even coating of primer to the fitting socket. Then re-coat the pipe with a uniform coating of cement. DO NOT ALLOW CEMENT TO RUN INSIDE OF PIPE - DAMAGE COULD RESULT.
4. Engage pipe and socket as quickly as possible, giving a quarter turn to pipe to evenly distribute the cement.
5. Be sure that pipe bottoms fully to socket bottom, and hold in place for approximately ten seconds to prevent the pipe from being forced back out by pressure formed in the joint.
6. Joint should not be handled or disturbed for approximately thirty (30) minutes. Allow the joint to cure twenty-four (24) to forty-eight (48) hours before applying pressure. A longer curing time may be required during cold, damp days.
7. Keep can closed when not in use. Cement is highly volatile and also will absorb moisture from the air. Do not use if thick, lumpy or jellied. DO NOT USE PRIMER OR CLEANER IN JELLIED CEMENT. THIS CAN CAUSE A LEAKY JOINT. DISCARD CEMENT IF IT BECOMES LUMPY OR JELLIED.
8. Use a natural bristle brush. Proper brush width would be 1/3 the diameter of the pipe.
9. Refer to ASTM-D-2855: Making solvent cemented joints with Polyvinyl Chloride (PVC) pipe and fittings.

Solvent Cement Requirement Chart

Joints Per		Joints Per	
Size	Quart	Size	Quart
1"	240	6"	16
1.25"	180	8"	9
1.5"	120	10"	6
2"	90	12"	5
3"	42	14"	4
4"	30		

These estimates are approximate and should be increased or decreased according to the particular laying conditions. For hot weather, increase by approximately 15%. For cold weather, decrease approximately 10%.

Bolted Couplers are shipped assembled and boxed individually.

NACO Products Bolted Compression Couplers with *Injection Molded* Fiberglass Reinforced PVC Flange Ends.

Exceptional Corrosion Resistance -

Combine *injection molded fiberglass reinforced PVC flanges*, *PVC body*, and Buna-S gaskets and you have a superior product that **will not pit, rust, or scale**; which is common to metal compression couplers.

6" & 8" - 4 bolts
10" - 5 bolts
12" - 6 bolts
14" & 15" - 7 bolts

Bolted Couplers are shipped assembled and boxed individually.

NACO Products Bolted Compression Couplers with *Injection Molded* Fiberglass Reinforced PVC Flange Ends.

Exceptional Corrosion Resistance -

Combine *injection molded fiberglass reinforced PVC flanges, PVC body*, and Buna-S gaskets and you have a superior product that **will not pit, rust, or scale**; which is common to metal compression couplers.
